Back Propagation

- Layer 1 weight updates using gradients
  - $\delta\text{Error}_{1,0}/\delta(w_{1,0,0}) = \text{-}2*(t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * \psi_{0,0}$
    - The constant 2 is of no consequence since we are going to be using a learning factor, η
    - $\psi_{0,0}$ is an output of the previous layer (from neuron 0 of layer 0)
    - t is the true/expected value – value to be learned
    - So the delta to be subtracted from $w_{1,0,0}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * \psi_{0,0}$
  - $\delta\text{Error}_{1,0}/\delta(w_{1,0,1}) = \text{-}2*(t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * \psi_{0,1}$
    - The delta to be subtracted from $w_{1,0,1}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * \psi_{0,1}$
  - $\delta\text{Error}_{1,0}/\delta(w_{1,0,2}) = \text{-}2*(t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * \psi_{0,2}$
    - The delta to be subtracted from $w_{1,0,2}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * \psi_{0,2}$
  - $\delta\text{Error}_{1,0}/\delta(w_{1,0,3}) = \text{-}2*(t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0})$
    - The delta to be subtracted from $w_{1,0,3}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0})$

- Note that in all of these update equations for layer 1, the term, $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0})$, is the same.

    - The delta to be subtracted from $w_{0,1,0}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * w_{1,0,1} * \psi_{0,1} * (1 - \psi_{0,1}) * Input_0$
    - The delta to be subtracted from $w_{0,1,1}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * w_{1,0,1} * \psi_{0,1} * (1 - \psi_{0,1}) * Input_1$
    - The delta to be subtracted from $w_{0,1,2}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * w_{1,0,1} * \psi_{0,1} * (1 - \psi_{0,1})$
- Layer 0, Neuron 2, weight update using gradients

  - $\delta Error_{1,0} / \delta(w_{0,2,2}) = -2*(t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * w_{1,0,2} * \psi_{0,2} * (1 - \psi_{0,2})$
    - The delta to be subtracted from $w_{0,2,0}$ is $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0}) * w_{1,0,2} * \psi_{0,2} * (1 - \psi_{0,2}) * Input_0$

- Note, again, that in all of these update equations for layer 0, the term, $-\eta * (t - \psi_{1,0}) * \psi_{1,0} * (1 - \psi_{1,0})$, is the same. Let's call this term δ
